

# Slingshot Grinder

## DESCRIPTION

The Slingshot Volumetric grinder is the grinder reinvented. Available in flat 64mm or 75mm burrs and 68mm conical burr, this grinder features a self dosing system that remains consistent, even when the grind is changed.

This Slingshot features two operating modes, Auto and On Demand. The Auto mode can be selected for speed during peak times.

The On Demand mode can be selected during quieter periods, grinding each shot of coffee so it is fresh every time.

The burr life indicators takes the guess work out of blade replacements and will illuminate when burrs are due for replacement, maximising coffee quality.

## S64 Flat

**Burrs**  
64mm Flat

**Hopper Capacity**  
1.2kg

**Speed**  
1280 rpm

**Power**  
220-240v 380/460W

**Weight**  
19.5 Kg

**Performance**  
7-8 sec for 20gr dose

## C68 Conical

**Burrs**  
68mm conical

**Hopper Capacity**  
1.2kg

**Speed**  
450 rpm

**Power**  
220-240v 450/570W

**Weight**  
23.5 Kg

**Performance**  
4-5 sec for 20gr dose

# Slingshot Grinder

## WHAT'S THE BIG DEAL?

**Self Dosing Grinder** This grinder features a volumetric self-dosing chamber which is always on standby to provide the professional barista with their next espresso shot. Single or double, the dosage will still be correct with zero coffee wasted.

**Zero Waste Delivery System** No more lost revenue due to coffee waste. Slingshot features a sealed distribution chamber which accurately delivers the ground coffee to the portafilter with no loss of coffee. No more shaky hand to avoid ground coffee spills from the portafilter.

**Micrometric Dosage Adjustment** This grinder features a volumetric dosage system that allows the barista to set different coffee dosages for the single and double portafilter.

**Burrs Life Monitoring** Slingshot will register the total grinding time, this allows the barista to monitor when the Burrs need to be replaced. A warning icon will advise when to schedule the burrs replacement.

**Mixing Chamber** When the ground coffee is delivered into the portafilter, a premix occurs in the coffee mixing chamber. This unique delivery system improves coffee distribution and consistency.

**Memory Position Burrs** The coffee grinder chamber is accessible by removing the top burr sleeve. It will save time for the maintenance-cleaning, and the grinder will always retain its last grinder setting.

**On Demand Switch Operation** With this function Slingshot grinds only when you press a button. This function can be used for the initial calibration or to use during slow coffee service.

**Micrometric Grinding Adjustment** The adjustable micrometric grinding system is a “step-less” design that allows precise control over the coffee grind. Grind setting is made by rotating a tactile control dial integrated with a digital position counter.

**Coffee Display Window** The Patent Pending free standing coffee hopper design has a built-in window for displaying general information such as origins, coffee brand or cafe or cafe name.

**Cooling Fan** This range of grinders has an inbuilt climate system. The design is optimized to control the internal airflow and to maintain the coffee chamber at constant temperature.
