Power Supply

Within 1 metre of powerpoint

DESCRIPTION

Übermilk is engineered and built in Germany, with the simple touch of a button. This innovative machine will froth milk to the ideal temperature, where it can exhibit full sweetness and velvety smooth micro foam. This feature allows barista's to concentrate on perfecting espresso shots and latte art; whilst also freeing them up by engaging with their customers. Übermilk is both reliable and hygienic, eliminating milk wastage. Thanks to unique automatic presets which deliver quality foamed milk, time after time. This amazing machine features a 'built-in' individual controlling system; a cleaning system with a journal; and delivers chilled milk on tap. Übermilk can increase efficiency and workflow, decrease stress, and ultimately keep loyal customers happy and not standing in queues for extended periods. With its sleek design, Übermilk will fit right into any barista's work station. Available in three colours, black, white, and silver (Stainless-steel)

The best part of the Übermilk it's able to syphon from a milk supply directly at of your existing fridge via an intake hose that passes through the side door of your fridge, without the need to drill any holes or modify your fridge. 22L milk containers can be used for this purpose. No external pump and no water supply needed.
